

# CAN YOU FIND THE DANGERS TO THE WILDLANDS?

TORCHES AND OTHER OPEN FLAMES CAN SPREAD TO THE WILDLANDS AND CAUSE AN UNCONTROLLED WILDFIRE

CHARCOAL AND WOOD BARBECUES ARE OFTEN DUMPED BEFORE THEY ARE OUT. THE ASHES CAN SMOLDER A LONG TIME AFTER YOU LEAVE.

MAKE SURE YOU HAVE EXTINGUISHED ALL THE COALS BEFORE YOU LEAVE. IF THEY ARE TOO HOT TO TOUCH, YOU'RE NOT READY TO LEAVE.

## THE FLAME

DANGERS FROM THE HOME INCLUDE CARELESS DEBRIS BURNING, NO SPARK ARRESTORS ON THE CHIMNEY, AND USING POWER EQUIPMENT ON HOT WINDY DAYS.

THE BIGGEST SOURCE OF HUMAN CAUSED WILDFIRES ARE ESCAPED OR ABANDONED CAMPFIRES. MAKE SURE YOU HAVE MINERAL SOIL ALL AROUND YOUR CAMPFIRE AND THAT ITS OUT WHEN YOU LEAVE. HOW?

1. POUR WATER ON IT
2. STIR IT AROUND
3. POUR MORE WATER ON IT.

IF ITS TOO HOT TO FEEL WITH YOUR BARE HAND, ITS TOO HOT TO ABANDON.

For more information on wildfire prevention, please contact your local fire department, public land agency or visit the following web sites.
